

William Kenyon®

Perforating Blades made to the highest tolerances to ensure...

- Longer blade life.
- Fewer broken blades when perforator head is wrapped.

Available in:

- CPM 10V.
- High speed steel.
- Blades made to your specification.
 - Number of bonds per edge.
 - One edge, two edges, and/or ends bonded.
 - Height, thickness, length and radius.
 - Blade lengths up to 180".
- All perforator blades are etched with a part number unique to your bond patterns and materials.
- Large inventory of standard size blanks for immediate bonding and delivery. Carbide anvils with a radius cut edge in stock.
 - Inventory programs available to release blades on a pre-set schedule or by P.O. reducing on-site mill inventory levels.
- William Kenyon® has the technology and manufacturing processes in place and is committed to supplying the converting industry with the highest quality, close tolerance, perforating, circular and flat knives for all of your converting requirements.
